

### **SAMPLING PLATE**

Our new large scale (22-inch diameter) vacuum plate provides a tremendous amount of surface space to control suction or sampling on a big scale. You can place your samples or growing plants on one of these large plates and induce the matric suction required up to 1 bar of suction. Forget the mess of sand tables and other crude devices, this is a complete, "system level" vacuum plate assembly, which is also extremely easy to use, and install. Simply wet up the samples on the plate, tie into a vacuum reservoir and pull the suction level required - it couldn't be easier. The extractor plate comes with 5 removable legs and a hose connector on the bottom of the plate. If you're doing any kind of vacuum work, you should seriously consider this new 1725D22 plate.
