

# Compactability Apparatus

Consisting of a special compaction mould and anvil, with a vibrating hammer fitted to a load frame with surcharge weight, operating on a 240V supply. Based on a design by the Transport Research Laboratory in the UK that ensures that the correct downward pressure is applied to the sample during the test.

## ***Complete with:***

- Load Frame
- Vibrating Hammer
- Surcharge Weight
- Compaction Mould
- Anvil
- Pack of 100 Filter Papers 150mm in diameter
- 10 Fibre Filters
- Vernier Gauge
